

Draw the Path: Portfolio Sitemap + Toolkit

Name: Muhammad Ali

Track: General AI Fluency

Assignment: Draw the Path: Portfolio Sitemap + Toolkit

Portfolio Sitemap

The goal of my portfolio is to show my work as a Computer Science student and encourage potential employers or clients to contact me. I wanted to keep the website simple so visitors can quickly understand who I am, see my projects, and reach out without unnecessary pages.

Why I Chose These Pages

Home

The Home page will introduce who I am, what I do, and what kind of work I enjoy. It will also include a short introduction, a call-to-action button, and a preview of my best projects.

Projects

This page will showcase my software development projects. Each project will include a short description, the technologies used, screenshots, and links to the source code or live demo when available.

About

The About page will briefly introduce me, my educational background, technical skills, and my interest in software engineering and web development.

Contact

The Contact page will provide an easy way for recruiters, clients, or collaborators to reach me through email and my professional profiles.

Toolkit Setup

I created accounts for the following tools:

- ChatGPT
- Claude
- Gemini
- Perplexity

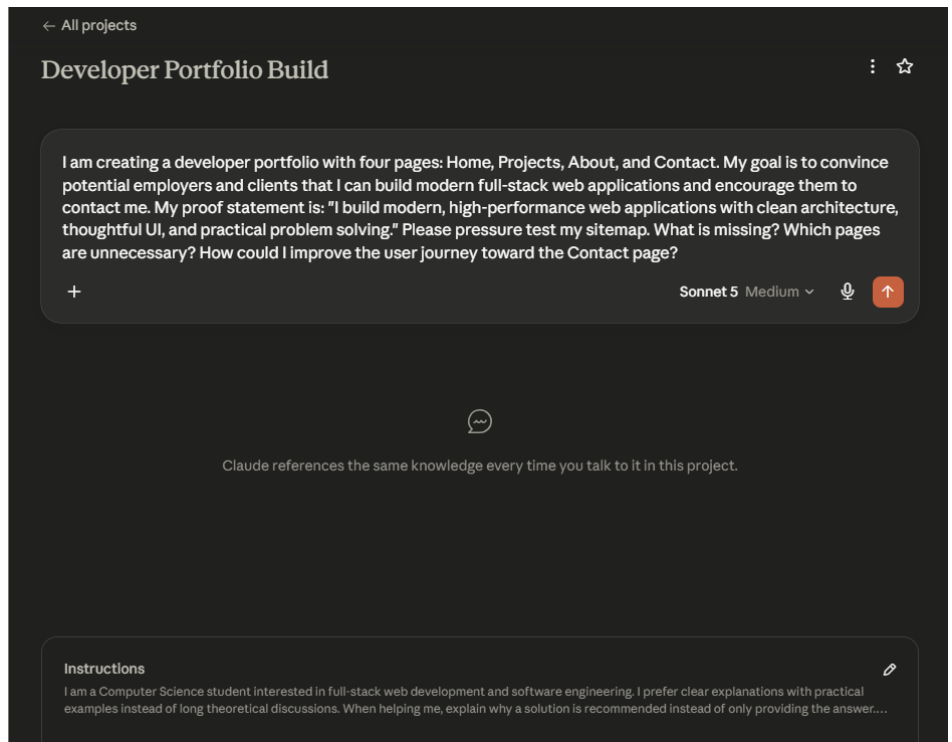

Claude Project

I created a Claude Project named:

Developer Portfolio Build

Custom Instructions

I am a Computer Science student interested in full-stack web development and software engineering. I prefer clear explanations with practical examples instead of long theoretical discussions. When helping me, explain why a solution is recommended instead of only providing the answer. My current goal is to build a professional portfolio that demonstrates my technical skills and helps me prepare for internships and future career opportunities.

Portfolio Review

I asked Claude to review my portfolio structure and check whether it supports my goal of encouraging visitors to contact me after viewing my work.

The feedback suggested that the structure is simple and easy to follow, but it also recommended highlighting my best projects directly on the Home page so visitors can immediately see examples of my work without opening another page.

Changes I Will Make

Based on the feedback, I will add a “Featured Projects” section on the Home page. This will allow visitors to see my strongest work as soon as they visit the website and make it easier for them to decide whether they want to learn more or contact me.
