

What Are You Proving?

Name: Muhammad Ali

Track: General AI Fluency

Assignment: What Are You Proving?

Proof Statement

My portfolio proves that I can build practical machine learning solutions by applying AI and machine learning concepts to solve real-world problems. I want to show this to AI/ML recruiters and hiring managers who are looking for interns or entry-level Machine Learning Engineers. The main action I want them to take after viewing my portfolio is to contact me for an interview or internship opportunity because they can see projects that demonstrate my skills and learning.

Why This Needs to Exist

A CV or LinkedIn profile can list my education and technical skills, but they cannot show how I apply machine learning concepts to real projects. My portfolio provides evidence of my work, problem-solving approach, and growth toward becoming an AI/ML Engineer and later an MLOps Engineer.
